

The company "P.U Piotr Demkowski" is a company that specializes in manufacturing all kinds of structures built from concrete. With his years of experience and his experienced team he ensures that a project is brought to a successful completion. The first job this company did for me and Vuylsteke-eiffage was an office building in Kortrijk. He is currently working on his second project for us, which is a museum depot located in Oostduinkerke. Piotr is someone who provides the best quality for his clients and thoroughly studies the project before starting. This way, few mistakes are made resulting in virtually no delays and no extra costs. Overall, I am very satisfied with the good collaboration with this company
